

Intercontinental Construction Contracting – Christl Arena and Tate Rink Stadium Seating Replacement

Under ICCI, we were responsible for procuring, delivering and installing the spectator seating at these two locations. Tate Seating capacity is 2500 and the Christl Arena holds 5000. The sports surfaces were protected during the work. The job involved demo and removal of the existing seats, providing and installing bleacher and seatback seating and lettering and numbering the rows and isles. The project was completed on time and within budget. Both facilities were kept open for cadet use as needed during construction.
